

EVault Plug-n-Protect

Key Benefits

- Save up to two weeks during procurement, setup and configuration
- Get more protection for your dollar
- Protect any combination of platforms and applications with leading EVault Software
- Recover a failed system using built-in EVault System Restore
- Minimize potential data loss with EVault Real-Time Protection (some models)
- Eliminate the hassle of contacting multiple vendors for support

An all-in-one backup and recovery appliance for fast and economical deployment of a complete data protection solution.

Buying components separately and creating your own backup and recovery solution can take a lot of time, resources, and expense. Deploy the award-winning EVault® Plug-n-Protect and much of the work has been done for you. EVault Plug-n-Protect is an all-in-one backup and recovery appliance consisting of pre-configured hardware and storage, plus a suite of EVault products—for the fastest path to comprehensive data protection.

More Value at Lower Cost

EVault Plug-n-Protect gives organizations an affordable way to protect their critical systems and data. By packaging all of the components together into one complete solution, you not only save on upfront costs, but also save time associated with procurement, setup, configuration, and deployment. And once EVault Plug-n-Protect is up and running, you can continue to enjoy savings by consolidating resources and streamlining backup operations. The solution can be easily managed via EVault CentralControl, an intuitive, web-based console that allows you to configure backup jobs and retentions, and initiate restores across your organization from one central interface.

Powered by EVault Software

EVault Plug-n-Protect is powered by EVault Software, a true disk-based backup and recovery product trusted by customers globally to protect their mission-critical systems and data. EVault Software uses an arsenal of end-to-end performance optimization techniques—such as bandwidth throttling, client-side delta-processing, compression, and deduplication—to accelerate backups, minimize the burden on source systems, and maintain a small storage footprint.

All EVault Plug-n-Protect configurations come with your choice of EVault Agents and Plug-Ins, allowing you to protect any combination of platforms and applications. The solution offers protection for Microsoft Windows, Novell NetWare, Linux, Sun Solaris, HP-UX, IBM AIX, IBM i, VMware, Microsoft SharePoint, Microsoft Exchange, Microsoft SQL Server, Microsoft Cluster Services, and Oracle databases.

Single Solution for System and Data Recovery

EVault Plug-n-Protect allows organizations to apply different recovery policies to different groups of data and systems. All configurations feature EVault System Restore, offering a quick and painless method for completely recovering a system after a catastrophic failure. EVault System Restore is an advanced bare metal recovery technology that enables you to quickly recover an unusable system. In just minutes, you can initiate recovery of a system onto similar hardware, dissimilar hardware, or a virtual machine. It can restore both the system and data in a single pass. You get a unified solution that eliminates the need for multiple backups and dramatically reduces downtime.

A Reliable and Efficient Storage System

Select EVault Plug-n-Protect configurations take advantage of Nexsan SATA storage systems. Their advanced mechanical design provides superior cooling for optimal thermal operation, reduces drive vibration, and delivers outstanding energy efficiency in a high-density form factor.

The Nexsan storage systems also employ energy-saving AutoMAID™ technology. AutoMAID (Massive Array of Idle Disks) allows the systems to place their disk drives into an idle state to conserve energy, yet provide near-instantaneous access to data. This powerful combination of high reliability with energy-saving capabilities helps you maximize the total return on your investment.

Specifications

EVault Plug-n-Protect is available in a variety of configurations. For each configuration, you can choose which EVault Agents and EVault Plug-Ins you'd like to deploy.

	PNP 300	PNP 600	PNP 600XB	PNP 1200XB	PNP 1200XT

Datasheet

EVault Plug-n-Protect

Technical Support

EVault offers one single point of contact for all your hardware and software support needs, eliminating the hassles of contacting multiple vendors. EVault Plug-n-Protect includes:

- 24/7 technical phone support for critical issues
- 3-year Limited Warranty on hardware (parts and labor)
- Optional onsite training and support
- Extendable service contracts available
